Objective

Seeking a challenging position in a reputable organization where I can learn new skills, expand my knowledge, and leverage my learnings to contribute to the company's success.

Education

- **B.Tech in Information Technology**, E.G.S Pillay Engineering College, Nagapattinam **2022–2026**
CGPA: 6.73
- **HSC**, SRVS National Higher Secondary School, Karaikal **2021–2022**
Percentage: 60.0%
- **SSLC**, SRVS National Higher Secondary School, Karaikal **2019–2020**
Percentage: 56.0%

Technical Skills

- Programming Languages: Python
- Web Development: HTML5, CSS3, Javascript, React.js, Tailwind CSS
- Database and Backend: MongoDB Atlas, Mongoose, Node.js, Express.js
- Cloud Services: Cloudinary
- Deployment And Hosting: Git and Github, Vercel
- Excel
- Tools: Figma, Android Studio, Visual Studio, Vite, npm /yarn (package managers)

Projects

- **E-Commerce Website (MERN Stack)**
Developed a full-stack e-commerce website using the MERN stack with customer and admin portals. Customer features include account creation, secure login, product browsing, cart management, check-out, order tracking and payment gateways. Admin features include secure login, product management, customer activity tracking (login/logout history), order status updates, and customer impersonation for testing settings used to change the fonts and theme customization. Implemented MongoDB with Mongoose for data persistence, integrated Cloudinary for media storage, and built a Node.js/Express.js backend to manage APIs and business logic. [Project Link](#) — [Live Demo](#)
- **AI-Based Smart Energy Management and Carbon Reduction Reward System (Main Project)**
Developed an AI-powered smart energy management system to monitor, predict, and optimize electricity consumption using Long Short-Term Memory (LSTM) models. The system analyzes energy usage patterns, calculates CO₂ emissions, and provides reward points for energy-efficient behavior. Built a responsive dashboard for real-time monitoring, prediction analysis, alerts, and reward tracking.
Technologies Used: Python, FastAPI, TensorFlow/Keras, MongoDB, HTML5, CSS3, JavaScript, LSTM, Pandas, NumPy.

- **Water Management using IoT (Mini Project)**

An IoT-based Water Usage Management System that monitors and optimizes water consumption in real time. It uses smart sensors and cloud analytics to detect leaks, reduce waste, and promote sustainable water use through automation and data-driven insights

- **Mobile App Development Of Smart Water Network (MAD Lab project)**

SmartWaterNet is a smart IoT-based mobile application designed for efficient water usage monitoring and management. Using real-time data from flow and pressure sensors, the app detects leaks, tracks consumption, and provides instant alerts and analytics. With automated control features and cloud integration, it empowers users to reduce wastage, cut costs, and contribute to sustainable water use—anytime, anywhere.

Certifications

- Full Stack Development Course – Datanerdz.AI
- App Development Course – Datanerdz.AI
- Cyber Security Program – NIT Trichy
- Database Management System Course - Infosys Springboard
- Introduction To Data Mining Course - Infosys Springboard
- Computer Vision 101 Course - Infosys Springboard
- Machine Learning And Advanced AI Techniques Course - Alison
- Getting Started With AI Course - IBM
- Data Analytics Using R - IBM SkillsBuild
- Participation Of Cloud Computing Course - Orionshift
- AWS Technical Essentials Certificate

Awards

- Best Student Award in Class – 2022
- Science Expo Best Innovator Award – 2023

Professional Skills

- Time Management
- Adaptability
- Team Work

Languages Known

- English
- Tamil

Declaration

I hereby declare that the above information is true to the best of my knowledge and belief.
